Pamplin News Reported

Pamplin, June 17.- Rev. Hiram L. Reeves is spending a week at Hampden-Sydney as a director of the Young Peoples' Conference.

Misses Virginia Fitzgerald, Mabli Grace Cunningham, Betsey Longworth, Kitty Carson and Aileen McClenny and Russell Blackburn are attending this conference.

The Womans' Auxiliary of Beale Memorial church met with Mrs. E. W. Cunningham last Thursday afternoon.

Misses Sallie Love and Elizabeth Storry and H. T. Terry Jr. are spending a week with their brother, Chatham Terry, camping at Tye Brook Camp.

Mr. and Mrs. Frank Irving attended the graduation of their son, Edward, at V. P. I.

Misses Flora Belle Williams and Ann Clark were recent visitors in Farmville.

Mrs. John Paultney of Butler, Pa., is visiting relatives in the vicinity and is now the guest of Mr. and Mrs. Joe B. Neely.

W. R. Brightwell, who has been a patient at the Memorial hospital in Lynchburg for three weeks returned to his home Sunday. Jack Brightwell of Christiansburg accompanied his father to Pamplin.

Mrs. Ila Panton Bateman, and daughter, of Newport News are guests of the former's sister, Mrs. C. H. McCall.

Among those who joined the Mc-Calls and their guests at Holiday Lake Friday afternoon for a picnic supper were: Misses Mattie Thornton and Jane Estes Martin, Mrs. Flossie Thornton Martin, Mr. and Mrs. L. N. Ligon, Mr. and Mrs. W. B. Ford and Mr. and Mrs. R. S. Baldwin.

Rev. W. M. Black, Hollis Ligon and John Peter Ligon were visitors in Waynesboro last Wednesday.

Miss Cora Lee Gilliam, of Farmville S.T.C. is at home for the summer.

Rev. R. P. Welch, pastor of the Spring Creek church attended the Southern Baptist convention in Baltimore last week.

Little Bobbie McClenny is spending this week with his aunt, Miss Ruth Swan, of Hixburg.

Mrs. R. D. Sears recently visited her mother, Mrs. J. D. McDearmon.

Pauline Johnson, of Lynchburg is visiting Mr. and Mrs. T. N. Ransone.

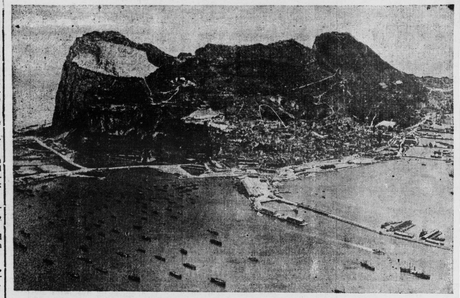
Miss Louise Pankey, of Farmville and Clarence Pankey of Danville spent last week-end with their father E. L. Pankey.

Mrs. George Williamson, of Lynchburg spents last week-end with her parents, Mr. and Mrs. Lacy Dickerson.

Mr. and Mrs. Lack Dickerson, Mrs. George Williamson, Miss Pauline Dickerson and Henry Hunget, were visitors of Mr. and Mrs. H. E. Martin of Richmond Sunday.

Miss Jessie Fitzgerald spent last week-end at her home here.

Britain's 'Rock' Under a Double Threat



An aerial view of Gibraltar, Britain's mighty fortress at the entrance to the Mediterranean, one of the key points of the European chessboard. Great Britain may be forced to defend Gibraltar against both Mussolini and Gen. Francisco Franco, who has been urged to repay Spain's debt to the Rome-Berlin axis by cooperating in any axis operation against the "Rock."

Vera Personals

Vera, June 19.- Mrs. Maude Abbitt spent the week-end with Mr. and Mrs. L. A. Coleman.

Mr. and Mrs. R. H. Coleman spent Sunday with Mr. and Mrs. Leslie Turnes, of Prospect.

Mr. and Mrs. Spencer Garrett Jr. spent the week-end with Mr. and Mrs. T. P. Robertson.

Walter Robertson and Albert O'Brien, of Washington spent the week-end here.

Maurice S. O'Brien and Fred Franklin spent Sunday in Charlotte county.

Mrs. D. N. Robertson, Annie and Roberta Robertson spent Sunday afternoon with Mrs. L. A. Coleman.

Mr. nand Mrs. Addlie Kyle, of Lynchburg also visited in the same home.

Mrs. O. G. Burnette and children spent Sunday night with Mrs. D. N. Robertson.

Mr. and Mrs. J. S. Kinney spent the week-end in Charlotte, N. C.

Maude Chermault is spending the week with Mrs. L. A. Coleman.

Mrs. R. O. Jones spent the week-end at her home near Chapanne.

Annie Robertson motored to Lynchburg Tuesday.

Miss Alma Agee, of Atlanta, Ga., spent Saturday with Mrs. Maude Abbitt.

Mr. and Mrs. Aubrey Seay spent Saturday evening with Mr. and Mrs. Fletcher Garrett.

Miss Ola Carter, of Lynchburg, spent the week-end with her parents.

King George Quite a 'Shot'

During a recent inspection tour of a gun factory that is operating night and day under war pressure, King George tried out a Bren machine gun. He put 60 bullets in or close to the bulls-eye at 20 yards, and remarked: "I had no idea the gun was so steady." The king has made a number of personal inspections in factories lately.

"Build-Up" Important Protector of Women

A weak, undernourished condition often enables *functional dysmenorrhea* to get a foothold; thus leads to much of woman's suffering from headaches, nervousness, and other periodic discomfort.

CARDUI'S principal help for such distress comes from the way it usually stimulates appetite; increases flow of gastric juice; thus aids digestion; helps build energy, strength, physical resistance to periodic pain for many.

Another way, many women find help for periodic distress: Take CARDUI a few days before and during "the time." Women have used CARDUI for more than 50 years!

Lemon Juice Recipe Checks Rheumatic Pain Quickly

If you suffer from rheumatic, arthritis or neuritis pain, try this simple inexpensive home recipe that thousands are using. Get a package of Ru-Ex Compound and a lemon. Add juice of lemon, and water, and the juice of 2 lemons. It's easy. No trouble at all and pleasant. You need only 2 tablespoonfuls two times a day. Often relief in 48 hours—sometimes overnight—splendid results. Ru-Ex Compound is for sale and recommended by

Electric Hotbeds Help Grow Realize Highest Market Pr

A good windbreak helps keep electric soil heating costs at m

By IRA MILLER
Rural Electrification Bureau

PRODUCE, plants and flowers raised out of season or ahead of the natural time command higher prices and a more ready market than those grown at normal periods. For many years, truck gardeners, horticulturists and florists have used manure hotbeds to help reach this choice market but, because of the uncertainty of the results which can be expected and because of the difficulty of obtaining adequate supplies of satisfactory manure, other methods of providing heat are used, among them electricity, steam, hot water and hot air.

The most modern hotbeds are heated electrically by means of a special metallic-sheathed resistance cable either buried in the earth, laid on top of the soil or fastened to the sides of the bed. Although only used in this country for about a decade, the results from electric hotbeds have been so satisfactory that thousands of new installations are being made each year.

The advantages of electric soil heating over the older methods include: Less time and labor required to construct and operate the bed; temperature automatically controlled within narrow limits; cheaper, in many instances, than other sources of heat; free from harmful fumes; less danger of soil contamination; beds do not have to be recharged each time they are used, requiring only the turn of a switch to start each run; plants are started in less time; higher percentage germination and of more and vigorous plants; easily changed to force plant growth as conditions may be used to grow crops as lettuce and radishes in winter; equipment lasts for years and agreeable to work.

Current consumption of hotbeds varies with seasons, Geographic location; seasonal variations; temperatures maintained, exposure, insulation, covering of beds and care with management. In consequence, a 6 sash or frame (6' x 3') may from 30 kw.-hr. per month to a maximum of 150 kw.-hr. during the wettest weather. At the three-cent rate, lower one often is available for monthly power cost per sash may vary from $0.90 to $4.50, probable range of $1.20 to $2.40 a month over the entire heating season when outside temperatures range around freezing and the best results obtained at 60 degrees.

Excluding labor, but including electrical and building costs, the total installation cost of one of these new units varies from $10.80 to $14 per sash, depending upon the size of the bed, its construction and the type and voltage of electrical equipment employed.

Full information on the selection, installation, operation and cost of electric hotbeds may be obtained without charge from your county agent, college or university, or from manufacturers of such equipment.

FSA FAVORS GROUP ACTION ON PART OF FARMERS

Group action is one of the methods used by Farm Security Administration borrowers and their neighbor farmers, to make their labor more effective and to put their farming operations on a sounder basis, according to Sneed H. Adams, supervisor of the agency in Amherst and Appomattox counties.

"The basis of FSA's lending program is a sound farm management plan for every individual farmer," Mr. Adams says. "Many times however services and facilities for successful operation are too expensive to be justified for an individual farmer. The logical step, many of our borrowers agree, is to arrange for joint use of the service."

VA. CROP REPORT GIVEN

Virginia crop prospects are "generally promising," Henry M. Taylor, Federal State Crop Statistician, has reported. Corn, cotton, peanuts and tobacco have been planted later than usual, he said, due to at unusually cold spring. During the later part of May and the early part of June conditions were very favorable for hay crops and pastures, and rapid improvement was noted. Potatoes were reported "unusually promising" and the apple outlook is better than expected and a much larger crop of peaches is foreseen than was estimated a month ago.

VIRGINIA FARM HOMES NEED MORE CONVENIENCES

Blacksburg, June 19.- Agricultural engineers of the Virginia Agricultural Extension Division say that approximately 50 per cent of Virginia farm homes are only fair or poor in at least one of eight important features. This has been shown by surveys of 23,000 typical rural dwellings in recent years, and despite some improvement in farm economic conditions, G. D. Kite, one of the engineers, believes that very few of the needed repairs and improvements have been made.

Typical communities in these counties have been studied: Amherst, Dinwiddie, Essex, Fauquier, Halifax, Louisa, Norfolk, Roanoke, Rockingham and Tazewell. Every effort was made to get a typical cross-section of nationalities, farm values, owners, tenants, types of farming, physiographic features of land, and length of settlement.

The surveyors found out that 13 per cent of the farm houses had been built less than ten years, 28 per cent were between 10 and 24 years old, 31 per cent between 15 and 49 years old, and 27 per cent were 50 years old and over.

About half the houses were painted frame ones, two per cent were brick, and a third pore frame houses were unpainted. Eighteen per cent were one-story and the rest had more than one story.

Only 9.4 per cent of these houses had bathrooms; 35 per cent had no closet space, and 80 per cent had no basements. The average house had a little better than 5 rooms, and was occupied by at least 5 persons.

When it comes to modern conveniences other than bathrooms, Virginia farm houses are woefully lacking, Kite says. The survey showed that only 6 per cent had piped hot and cold water; 12 per cent had piped cold water; 7 per cent had indoor toilets; 14 per cent had kitchen sinks with drains; and only 3 per cent had septic tanks.

Whereas only 13 per cent of farm houses had electricity about 5 years ago, the engineers believe this one item has shown marked improvement in recent years. It is estimated that 24 per cent of rural homes now have this convenience. By fixing with this the former 3 per cent with mechanical refrigeration and power washing machines h a s no doubt risen considerably. Three per cent with central heating systems probably remains about the same.

Only 14 per cent of the 23,000 typical farm home owners were interested in improving their homes to the extent of borrowing $100 or more to make the improvements.

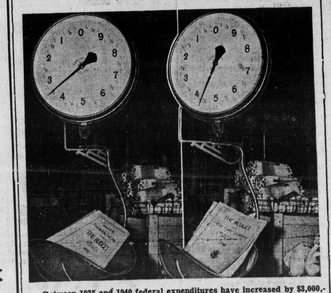
$230,769,230 Per Ounce!



Between 1935 and 1940 federal expenditures have increased by $3,000,000,000, and the budget has gained 13 ounces in weight. This means that every time the budget becomes an ounce heavier the spending increases, on an average, by $230,769,230. The picture was prepared by the National Small Business Men's association with headquarters in Chicago.

High Quality Hay Best For Market or for Farm Use

Farmers can't take quality in hay for granted even when hay is fed on the farm where it is grown, says W. H. Byrne of the Virginia Agricultural Extension Service.

Mr. Byrne, a former Appomattox county agent, points out that market prices usually make it more profitable to take the better grades of hay to market than to offer hay of the lower grades or qualities. He says that one of the most economical ways to increase the feed supply on farms is to improve the quality of the hay produced, that on most farms material savings in the cost of producing livestock and livestock products can result from more high-quality hay and less grain per animal unit.

Quality in hay really means feed value. The factors which affect quality include the maturity or ripeness, the percentage of leaves, and the color. They also include consideration of foreign material, such as weeds mixed with the hay, the soundness or condition, the size and pliability of the stems, and even the "aroma."

Mr. Byrne says, "Quality in hay refers mainly to its protein, carbohydrate, mineral, and vitamin content. From the feeder's standpoint, the extent to which these nutritive elements are present is represented by the quality factors, such as maturity, leafiness, and green color, that can be judged by examining the hay."

Farmers and agricultural workers in many areas are rather generally agreed that the supply of roughage should be increased and the quality improved. Mr. Byrne says that farmers who want to improve the quality of their hay crop may be interested in a new miscellaneous bulletin No. 363, released by the U. S. Department of Agriculture, entitled "Hay Quality- Relation to Production and Feed Value." The authors are E. O' Pollock and W. H. Hosterman of the U.S. Agricultural Marketing Service.
